

YOU CAN CONTRIBUTE TO THE IGARSS COMMUNITY REMOTE SENSING PROJECT

Do you want to be part of the IGARSS Community Remote Sensing (CRS) project?

You can help validate the most recent global landcover maps. Just go to <http://igarss.geo-wiki.org>, click on "Register here!", and follow the registration instructions. You will be able to share *your* knowledge of landcover - near your hometown or in other areas you are familiar with.

The screenshot shows the IGARSS Geo-Wiki website interface. At the top, there are logos for IASA, FH, Felis, GEOBENE, and EuroGEOSS. The main header features the IGARSS 30th Anniversary logo (July 25-30, 2010, Honolulu, Hawaii, USA) and the Geo-Wiki logo. A navigation menu includes links for Home, Instructions, Contact us, Disclaimer, and Register here! (highlighted with a red box). Below the menu is a Google Translate widget. The main content area has a heading "Help To Validate Global Land Cover!" and a paragraph explaining the Geo-Wiki Project's goal to improve global land cover maps by having volunteers review hotspot maps. A "View publication" link is provided. Below the text is a satellite image of Africa with colored overlays. On the right side, there are two boxes: "Login" with fields for email and password, and "Latest members" listing users and their join dates. Below that is a "Most active members" list.

Each IGARSS registrant who contributes will show up as a pushpin on the globe. Sign in now and be a part of this IGARSS community effort. Watch the website to see how you and your IGARSS colleagues can make a difference through community remote sensing.

The person who has validated the most points (quality will be checked) by noon on Friday July 30th will **win a SONY Digital Camera HX5V/B with GPS and Compass**
